SUMMARY

Software Engineer - Web, DevOps, Infrastructure

Senior Software Engineer specializing in full-stack web development, mobile application development, DevOps, and cloud infrastructure management with measurable impact on deployment speed, developer productivity, and product scalability. Deeply experienced in modern frontend and backend frameworks (React, Vue, Astro, Tanstack), CI/CD (GitHub, GitLab), Linux server management (Docker, Kubernetes, Ansible, Nix).

EXPERIENCE

Senior Software Engineer (Remote)

Mar. 2024 – Present

Dotcamp

Company based in NY, USA

- Led Tableberg development for a block-based table builder, emphasizing UX and shipping product changes that supported a 4.8/5 rating.
- Built a CI/CD pipeline to automate deployment of isolated test environments, reducing testing time by 50%.
- Resolved architectural constraints that were blocking development on a product with 50,000+ active installations.
- Overhauled codebase and architecture to unblock delivery of advanced features, including virtualized tables, datatables, and AI tables, for a product with 60,000+ active installations.
- Improved developer productivity by 30% by modernizing and standardizing developer workflows by implementing best practices including monorepo, CI/CD, and E2E testing.

Software Engineer (Remote)

Mar. 2023 – Feb. 2024

Dotcamp

Company based in NY, USA

- Shipped streamlined backwards compatible framework to ship features on legacy codebases
- Modernized legacy codebases to improve developer efficiency

Software Engineer

Jan. 2021 – Present

Freelance

- Developed the PodLP podcast app for resource-constrained Android devices.
- Led serverless development for patient management software used in diagnostic centres.
- Created web-based software for clothing shops handling sales, inventory management, and integration with receipt and label printers.
- Developed a simulation program for sensor data analysis using NSGA-II and Monte Carlo methods, capable of running hundreds of iterations per second on low-end hardware.
- Designed a star topology Bluetooth Low Energy (BLE) network using ESP32 boards for real-time transmission of environmental sensor data.

EDUCATION

Shahjalal University of Science and Technology

Bachelor of Science in Oceanography

Sylhet, Bangladesh

Feb. 2017 – Jan. 2021

TECHNICAL SKILL

Programming languages: TypeScript, JavaScript, PHP, Golang, Python, Bash, Kotlin

Frontend Technologies: React, Redux, Tanstack Query, Vue, Nuxt, Pinia, Tailwind, SCSS

Backend Technologies: Astro, Tanstack Start, Express, Laravel, Flask

DevOps: Docker, Kubernetes, Ansible, Git, Jujutsu, GitHub, Gitlab

Database Management: MySQL, SQLite, IndexedDB, PouchDB, Firebase Firestore, Drizzle

Other Web Technologies: Vite, Webpack, PNPM, PWA, Service Workers, Webhooks, Websockets, Zod

Cloud Platforms: AWS, Azure, Linode, Cloudflare, Netlify
